

Seminar 8

week 8 (17 November 2025 – 21 November 2025)

1. Complete the discussion about Java functional programming.
2. Problem 1: Given the following collection
`List<Integer> numbers = Arrays.asList(1, 2, 3, 4, 5, 6, 7, 8,9,10,11,12,14,15);`
Using Java functional style (Java streams), please write a program that is doing the following operations in the following order:
 - a)keep only the numbers which are multiple of 3 or multiple of 2;
 - b)transform each remaining number into a string, that consists of a prefix "A", the successor of the number and the suffix "B"
(eg. 6 is transformed into "A7B")
 - c)concatenate all the strings
3. Problem 2: Given the following collection
`List<Integer> numbers = Arrays.asList(1, 2, 3, 4, 5, 6, 7, 8,9,10,11,12,14,15,16);`
Using Java functional style (Java streams), please write a program that is doing the following operations in the following order:
 - a)eliminates all the numbers which are not multiple of 4;
 - b)transform each remaining number into its sucesor (eg. 4 is transformed into 5);
 - c)compute the sum modulo 2 of the remaining numbers (eg. (9 +5) mod 2=0)
4. Discuss the Garbage Collector implementation from lab assignment **A4**.
5. Start the Discussion about the lab asignment **A5**.
